

A scatter plot showing the relationship between 'times' (x-axis, 0 to 25) and an unlabeled y-axis. The data is divided into two groups: black circles and red circles. The black circles are concentrated in three main clusters: a large one at the top (times 8-21, y 10-25), a medium one at the bottom left (times 0-7, y 0-10), and a small one at the bottom right (times 21-25, y 0-10). The red circles are scattered throughout, with notable concentrations in the top cluster (times 8-21, y 10-25) and the bottom left cluster (times 0-7, y 0-10). The bottom right cluster (times 21-25, y 0-10) contains mostly black circles with a few red ones.
